

```
1  /* Notes
2
3  Study from line 27 to 37.
4
5  int -> Full Number, No Point, Eg -78, 0, 900 etc
6  a, b, c -> Places in computer memory where we will
7  store int (Full Numbers)
8  System.in -> Key Board
9  System.out -> Screen
10 Scanner scan = new Scanner(System.in);
11 We make Scanner (scan) for Keyboard. We use it to
12 get full numbers from keyboard.
13 Eg: a = nextInt();
14     b = nextInt();
15 Anything we put in double quotes " " is a string
16 which is printed. We use + and name of our place
17 (total) to print it.
18
19 System.out.print("Total is " + total);
20
21 */
22 import java.util.Scanner;
23 public class Starter_Program
24 {
25     public static void main(String[] arguments)
26     {
27         int a, b, total;
28         Scanner scan = new Scanner(System.in);
29
30         System.out.print("Provide first number : ");
31         a = scan.nextInt();
32
33         System.out.print("Provide second number : ");
34         b = scan.nextInt();
35
36         total = a + b;
37         System.out.print("Total is " + total);
38     }
39 }
```
